

SHAILYN MOORE

Software Engineer

SUMMARY

Seasoned Backend Engineer experienced in building robust and reliable backend services. Proven expertise in Node.js, GraphQL, AWS (API Gateway, Lambda, EC2, RDS, RabbitMQ), and database management (PostgresDB, MongoDB). Adept at solving complex challenges, optimizing performance, and enhancing user experience through scalable and secure solutions. Seeking to apply my expertise in coding, architecture, and agile methodologies to a tech company with global reach.

WORK EXPERIENCE

Software Engineer at Victorious, Los Angeles, CA

January 2023 — Present

- Developed reliable backend services utilizing Node.js, ensuring optimal performance and scalability to handle high-traffic applications.
- Designed and implemented RESTful APIs and microservices with GraphQL, AWS API Gateway, and AWS Lambda, achieving seamless integration and efficient serverless architectures.
- Deployed and managed applications on AWS EC2, optimizing resource utilization and database performance for high availability and fault tolerance.
- Integrated messaging and task queue systems using AWS RabbitMQ, improving the system's reliability and processing efficiency for asynchronous workflows.
- Engineered and maintained databases with Postgres databases with AWS RDS, ensuring data integrity, security, and efficient query performance.
- Led incident management efforts, swiftly diagnosing and resolving critical production issues to minimize downtime and ensure service continuity.
- Collaborated with cross-functional teams to design and deliver scalable solutions, enhancing the end-user experience and driving business growth.
- Conducted code reviews and provided mentorship to new back-end developers, fostering a culture of continuous improvement and knowledge sharing.
- Implement tracking and analytics tools to measure the effectiveness of growth initiatives and provide actionable insights to stakeholders.

Full-Stack Software Engineer at #100Devs Agency, Los Angeles, CA

January 2022 — December 2022

- Collaborated with a development team to build modern, responsive web applications following industry best practices.
- Built and optimized full-stack web applications using Node.js, Express.js, MongoDB, and React.js, focusing on clean code and modular architecture.
- Applied Agile methodologies, including SCRUM, to manage project timelines, deliverables, and team collaboration, improving productivity and project outcomes.
- Engaged in continuous deployment practices to streamline release cycles and deliver features rapidly and reliably.

Full-Stack Software Engineer at ShaiTech, Los Angeles, CA

August 2020 — Present

- Over 15 companies have been contracted to create websites and applications. Each application was tailored to the needs and requirements of each company.
